Inventor: Wright

Title: Golf Club Holding Rack

Response to Notice to File Corrected Application Papers

### ABSTRACT OF THE INVENTION

An extendable and retractable golf club holding rack, which is designed to be mounted in a stationary position in the ground. In the retracted position, a holding rack is set within an outer wall of an outer housing. A latching mechanism maintains the holding rack inside the outer housing. Upon release of the latching mechanism, the holding rack extends via a spring mechanism above the outer housing and above ground level. The top portion of the holding rack has elongated slotted openings for receiving golf clubs. After use, the holding rack is pushed in a downward motion, which allows the latching mechanism to re-engage, maintaining the holding rack in the retracted position within the outer housing.
